

# DATA ACCURACY FILTER FOR INTEGRATED EMERGENCY MEDICAL TRANSPORTATION DATABASE SYSTEM

## Abstract of the Disclosure

5           An integrated medical database system for the emergency medical transportation  
business. The system includes a dispatch module, clinical module, administration  
module and billing module. Each module may communicate data with one or more of  
the other modules to form a system incorporating data sharing, thus achieving an end-  
to-end automation of emergency medical care accounting. Internal consistency checks  
10       using specific libraries of modifiable data rules are performed by the system to ensure  
that proper treatments are performed according to a chosen diagnosis. The system  
includes a demographic data accuracy filter operating on patient data prior to the billing  
module.
